Professional Summary

Data Science Intern at Beckman Coulter Life Sciences with experience in predictive maintenance, anomaly detection, forecasting, machine learning, and AI-driven analytics. Skilled in Python, SQL, PyTorch, TensorFlow, React.js, and data engineering. Published IEEE researcher with hands-on experience developing scalable AI solutions for healthcare and laboratory systems.

Skills

Programming Languages

Python, R, SQL, JavaScript.

Data Science & Engineering

Data Analysis, Data Engineering, ETL Pipelines, Data Preprocessing, Feature Engineering, Exploratory Data Analysis (EDA), Statistical Analysis, Model Evaluation, Data Visualization.

Soft Skills

Leadership, Communication, Problem Solving, Team player, Time management.

AI & Machine Learning

Machine Learning, Deep Learning, Generative AI, Agentic AI, AI Agents, LLM Applications, Prompt Engineering, Predictive Maintenance, Forecasting, Time Series Analysis, LSTM, Graph Neural Networks (GNN).

Platforms | Tools

Git, GitHub, GitHub Copilot, Jupyter Notebook, Google Colab, Visual Studio Code, Android Studio, R Studio, Weka.

Frameworks | Libraries

PyTorch, TensorFlow, Keras, Scikit-learn, OpenCV, Pandas, NumPy, Matplotlib, Seaborn, React.js.

Web & Dashboard Development

React.js, REST APIs, Dashboard Development.

Professional Experience

Beckman Coulter Life Sciences

Aug 2025 – Sep 2026 | Bengaluru

Data Science Intern

- Developed predictive maintenance and forecasting solutions for laboratory instruments using machine learning and statistical analysis techniques.
- Built forecasting models to predict potential machine downtime and estimate future service requests, enabling proactive maintenance planning and reducing operational disruptions.
- Performed data engineering activities including data extraction, transformation, validation, and pipeline development for equipment performance and maintenance datasets.
- Analyzed sensor, operational, and maintenance data to identify trends, anomalies, and key factors influencing instrument reliability.
- Designed and developed interactive dashboards using React.js and Python to monitor equipment health, maintenance metrics, and service forecasts.
- Automated data processing, model inference, and reporting workflows to improve operational efficiency and support data-driven decision-making.
- Applied machine learning and predictive analytics to optimize maintenance schedules, improve service team readiness, and contribute to cost reduction initiatives.
- Explored and implemented Agentic AI concepts, developing AI-powered agents and workflow automation solutions to enhance productivity and data analysis processes.
- Utilized AI-assisted development tools including GitHub Copilot to accelerate code development, debugging, documentation, and solution prototyping.
- Collaborated with cross-functional teams to translate business requirements into scalable data science and AI-driven solutions.

GlowTouch Technologies

Aug 2023 – Jan 2024 | Mangalore, India

Graduate Engineering Trainee

- Delivered live chat support for Bluehost, resolving hosting, domain, and email issues.
- Guided users through cPanel, DNS settings, and WordPress troubleshooting.
- Ensured customer satisfaction with clear, efficient communication and timely resolutions.
- Collaborated with teams to handle escalated technical problems.
- Developed a strong understanding of web hosting environments, DNS management, and content management systems (CMS) like WordPress.

Projects | Internships

HumanizeAI — AI Text Humanizer & Writing Improver

Languages/Frameworks: Python, React, Flask, OpenAI API, Ollama

A full-stack application built to convert AI-generated text into natural, human-like writing using an advanced 3-pass processing pipeline. The system performs deep sentence restructuring, improves flow and variation, and applies an anti-detection sweep to eliminate common AI-writing patterns. It integrates OpenAI (GPT-4o-mini) and Ollama to support both cloud and local inference, along with customizable tone modes, temperature control, and multi-pass transparency for enhanced readability and user control.

Disease Spread Prediction Using GNN

Languages/Frameworks: Python, PyTorch Geometric
Developed a GNN-based model with a GAT architecture to predict COVID-19 spread across Indian states, using real-time data to generate node features from confirmed cases and mobility. Modeled states and their geographic proximity as a graph to capture spatial dependencies, and incorporated visualizations and optimization techniques (CVXPY, SciPy) to support decision-making.

Automated Script Generator Using LSTM

Languages/Frameworks: Python, TensorFlow / Keras
This project explores LSTM networks for automatic script generation by gathering genre-based scripts, building models, and evaluating narrative coherence. LSTMs address RNNs' long-term dependency issues, enabling the creation of tools to generate contextually relevant and creative scripts based on user prompts or genres.

Deep Steganography using Steganogan

Languages/Frameworks: Python, PyTorch
Image Steganography using GAN is a project that employs Generative Adversarial Networks to embed secret information within images securely. This method ensures sensitive data is hidden in a way that is challenging to detect or access by unauthorized individuals.

Quiz Temple

Languages/Frameworks: Java, XML, Firebase
A quiz application named Quiz Temple developed on and for Android with an attractive UI and best user experience, consists different categories and different set of questions like aptitude, general knowledge, etc. which will help to gain knowledge.

Mobile Application Development Internship 2022
Zephyr Technologies & Solutions Pvt. Ltd.
Fun Quiz (Mobile App Dev. - Java, MySQL): A "Fun Quiz" app offers various categories like history, science, and GK, allowing users to attempt quizzes, earn scores for correct answers, and view solutions for wrong attempts. Unlike many apps, it focuses on user-friendliness and clear feedback to enhance engagement and learning.

Web Development Intern 2021
Smartknower
Realistic Virtual Piano (HTML, CSS, JavaScript): This web page will have a realistic virtual piano in which when button are pressed the tones are being played. Supports background color changing of piano.

Education

M.Tech in Artificial Intelligence & Decision Science	2024 – 2026 Manipal, India
Manipal Institute of Technology	
CGPA-7.29	
B.E. in Information Science & Engineering	2019 – 2023 Nitte, India
NMAM Institute of Technology	
XII Std - PCMB	2017 – 2019 Moodabidri, India
Excellent PU College Kallabettu	
X Std	2017 Moodbidre, India
St. Thomas English Medium High School	

Publications

From Vision to Voice: A Multi-Modal Assistive Framework for the Physically Impaired
IEEE
Developed and published an assistive multimodal system in IEEE Access (2025) that converts images to text and seamlessly transforms the text into speech, enhancing accessibility for visually impaired users.

Certificates

Advanced: Generative AI for Developers Google Cloud skills Boost	Introduction to Cyber Security Issued by Cisco	Python for Data Science NPTEL Online Certification
Transformer Models & BERT model Google Cloud skills Boost	Udemy Certifications Completed courses focused on Data Science, Machine Learning, Generative AI, Python, and AI technologies.	

Extracurricular Activities & Achievements

- Actively involved in content creation: acting, short film direction, sketching, gaming, and dancing. Acted in multiple short films and videos; one received appreciation from actor Raj B. Shetty and other creators.
- Winner of several mono-acting and mad ads competitions, showcasing creativity and stage presence.
- Secured 1st place in Mono Acting at IDC Got Talent (Beckman Coulter) during internship and actively participated in various events and sports, demonstrating creativity, enthusiasm, and all-round involvement.
- Played football and hockey at the district level, demonstrating teamwork and competitive spirit.
